

### Maintenance

The life span of a door seal will be extended when properly cleaned on a daily basis. With proper cleaning fat and dirt won't get the chance to affect the PVC material. Fat causes PVC to dry out and get brittle which causes it to rip easily. A clean seal is also important for general kitchen hygiene and food safety.

### General

- Clean your refrigeration equipment seals daily for a maximum lifespan
- Use a clean soft cloth and Professional fridge seal cleaner (article 8.04.02-0) or a similar water based cleaning product.
- Other than prescribed cleaning product can damage the PVC which shortens the lifespan of seals.
- Do not use sharp objects to clean in-between the seals folds, this can cause irreparable damage to the seal.

### Cleaning

- 1 Remove any visible dirt like crumbs etc. using a brush.
- 2 Apply Professional fridge seal cleaner (article 8.04.02-0) on the seal.
- 3 Let it sit for 30 seconds.
- 4 Wipe dry with a clean soft cloth, also between the folds. Repeat treatment until the seal is entirely clean.
